

• ROSE FACULTY

Aiming at a unique diversity of teaching and research training in the field of Earthquake Engineering, the organisation of the ROSE School is based on a relatively short permanence of scholars with extremely high qualification. Indeed, all lecturers at the School are internationally recognised experts in the field, coming from a number of distinguished institutions.

The IUSS-Pavia is the last step of a long lasting higher education process started on 825 when King Lotharius appointed Pavia, the ancient capital of the Lombard kingdom, as the site for higher education of his kingdom. This process went through the foundation in 1361 by Emperor Charles IV of the Studium Generale later on named University of Pavia. The first Colleges for university students were established in the 15th and 16th centuries. They are now 15 offering, to the almost 2.000 students, a unique opportunity of study and cultural enrichment in a multidisciplinary and multiethnic environment. Through centuries the University of Pavia became one of the leading institutions in Europe.

IUSS fulfils, since 1997, an advanced teaching and research model successfully implemented by other prestigious institutions in Italy, like the Scuola Normale Superiore and the Scuola Sant'Anna in Pisa. Due to the completeness of its education and training fields, which allows a strong interdisciplinary approach, the mission of IUSS is that of contributing to the growth of a small number of selected students by offering them, at any step of their higher education, qualified programs enhancing their capabilities and knowledge. The Institute is also committed to scientific progress by preparing young researchers and developing scientific research programs.

Erasmus Mundus

The European Commission has approved and financed within the Erasmus Mundus II the Masters on Earthquake Engineering and Engineering Seismology (MEEES), coordinated by the ROSE School and featuring also the participation of the University of Grenoble Joseph Fourier (France), the University of Patras (Greece) and the Middle East Technical University (Turkey), which aims to enhance quality in European higher education and to promote intercultural understanding through co-operation with third countries, a relatively large number of scholarships are available for both non-European as well as European students. Interested applicants are invited to visit the MEEES website (www.meees.org) for detailed information and instructions on financial conditions and application procedures.

THE TENTH INTERNATIONAL ROSE SCHOOL SEMINAR

COLLEGIO CARDINALE RIBOLDI

Pavia, Italy

20-21 May 2010

ROSE SCHOOL

CENTRE FOR POST-GRADUATE
TRAINING AND RESEARCH
IN EARTHQUAKE ENGINEERING
& ENGINEERING SEISMOLOGY

• THE ROSE SCHOOL

The Centre for Postgraduate Training and Research in Earthquake Engineering and Engineering Seismology (ROSE School) is part of the Institute for Advanced Study of Pavia (IUSS: Istituto Universitario di Studi Superiori), a higher education institution in Italy that offers international advanced postgraduate programmes (Masters and Doctorate). Innovative, internationally planned, open minded, grown on the traditionally fertile soil of the University of Pavia, and based on a system of Colleges unique in Italy, the IUSS prepares brilliant individuals to take on the most challenging and demanding public and private posts in contemporary Italy, Europe, the Mediterranean area and the rest of the world.

The ROSE School provides therefore higher-level education in the field of earthquake engineering, offering a number of courses covering applied mechanics, structural engineering, earthquake engineering, engineering seismology and soil dynamics, with emphasis on both theoretical background and design considerations. The MSc and PhD degrees are jointly awarded by the IUSS and the University of Pavia.

Each course is intensively taught in a period of three to five weeks, during which the respective lecturer is able to fully dedicate his/her time and efforts exclusively to the scholastic activities at the school, thus ensuring teaching and research training at the highest possible levels of quality. All of the above endows a truly unique character to the ROSE School, be it for its fully international nature or for its innovative organisation in education and research training in the field of Earthquake Engineering.

• INTERNATIONAL ROSE SCHOOL SEMINARS

As a part of the ROSE programme, an International seminar is organised every year, to provide the School students with an opportunity to present and discuss their research work to an audience of international experts.

In addition to standard presentations on research work carried out at the School, the annual Seminars feature also the tradition of inviting a prominent scientist to deliver a keynote lecture on a given contemporary and highly relevant topic in the field of Earthquake Engineering. At this year's event, such keynote address will be delivered by Professor T.C. Pan, Nanyang Technological University, with the title "Seismic Hazard of Low/Moderate Seismicity Regions".

It is also foreseen that contributions to the seminar will be published, after a standard review process, in a special issue of the Journal of Earthquake Engineering, which will be distributed to all participants and journal subscribers in mid 2011. Copies of the JEE Special Issues containing the proceedings of previous editions of this annual Seminar are available from the ROSE School Secretariat, on request.

• ATTENDING THE EVENT

In addition to ROSE faculty and students, a maximum of 50 external participants may also be accepted, for which reason professionals and researchers worldwide are encouraged to take part in the event. A 160€ fee is required from external attendees, to cover for the cost of coffee/lunch breaks, seminar dinner and proceedings. Special financial conditions are, however, in place for University researchers or students, to whom a fee of not more than 120€ is usually requested. Those who wish to attend the Seminar are kindly invited to compile and submit the registration form to the ROSE School Secretariat, at the address given overleaf. If you need assistance of any kind (registration form, accommodation, travelling directions, etc.), please do not hesitate in contacting our staff at secretariat@roseschool.it. You may also refer to the ROSE website for further information on all ROSE School activities.

• VENUE

The ROSE School is located at the European Centre for Training and Research in Earthquake Engineering (EUCENTRE, www.eucentre.it), in Pavia, a historical town in the North of Italy (35 km from Milan), full of University tradition and fame. The Seminar itself will take place at the Collegio Riboldi (www.carcollege.it), a landmark structure dating back to the second half of the seventeenth century, purposely-refurbished to serve as an international hosting facility for postgraduate students and visiting scholars working in the field of natural risk mitigation. It is located in the centre of Pavia, in Via Luigi Porta, 10.

• POST-SEMINAR ACTIVITIES

A technical event is organized on Saturday May 22 to visit the large geotechnical laboratory of ISMGEO which hosts a 6 m diameter arm, 300g geotechnical centrifuge that has been recently equipped with a shaking table capable of reproducing single-degree of freedom prototype strong motion earthquakes in a scaled model. There are only four equipments of this type nowadays in Europe.

The laboratory is located in Seriate, a small town near Bergamo, about an hour driving from Pavia. Transportation will be provided. A detailed program of the tour can be found at both the ROSE School web site (www.roseschool.it) and the EUCENTRE web site (www.eucentre.it).

• PROGRAMME OF THE SEMINAR

Thursday, 20th May

13.00 – 14.30 Welcome lunch and registration

14.30 – 16.00 **Session 1 - Chairman: A. Dazio**

Shear strength of RC walls subjected to cyclic loading

J. Krolcicki¹, J.R. Maffei, G.M. Calvi

An innovative superelastic system for base isolation

G. Attanasi², F. Auricchio, G.L.Fenves

Flexure-shear element for 3D inelastic analysis of frames

J. Almeida², A. Correia¹, R. Pinho

16.00 – 16.30 *Coffee break*

16.30 – 18.00 **Session 2 - Chairman: G. Magenes**

Modelling and design developments for steel frame wood panel shear walls

S.A. Moayed Alaei¹, T.J. Sullivan, R. Nascimbene

A displacement-based design approach for seismic retrofitting of RC frames with steel braces

R. Sousa², J.M. Castro, R. Pinho

Nonlinear response of medium and long period SDOFs

D. Pennucci¹, T.J. Sullivan, G.M. Calvi

19.30 – 23.30 *ROSE Seminar Dinner*

Friday, 21st May

9.00 – 11.00 **Session 3 - Chairman: J. Berrill**

Methodology to perform advanced seismic slope stability analysis taking into account the uncertainties of input parameters

Z. Zugic², C.G. Lai, M. Corigliano

Azimuthal and thickness variabilities of seismic site effect response of the Utiku landslide (North Island, New-Zealand)

A. Quinteros³, S. Garambois, C. Voisin

Explicit/implicit nonlinear soil structure interaction study of the bell tower of Santa Maria Maggiore, Gardiagrele

L.A. Rosell², G. Camata, E. Spacone, C.G. Lai

Application of generalized attenuation descriptions and numerical simulations to PSHA

M. Villani¹, E. Faccioli

11.00 – 11.30 *Coffee break*

11.30 – 13.00 **Session 4 - Chairman: T.J. Sullivan**

Earthquake response of free-standing rocking bridges

M. Masoudi¹, R. DesRoches

Comparison of European and US approaches for consideration of P-delta effects in seismic design

R. Peres², J.M. Castro, R. Pinho

Seismic performance of high-rise buildings with PRESSS-technology

M. Palmieri³, S. Pampani

13.00 – 14.30 *Lunch break*

14.30 – 15.30 **Session 5 - Chairman: G.M. Calvi**

Keynote Lecture - Seismic hazard of low/moderate seismicity regions

T.C. Pan

Overview of 2009-2010 Eucentre activities

ROSE/MEEES Graduation Ceremony

Award of ROSE Prize 2010

¹ PhD Student, ² PhD Alumnus, ³ MSc Student
