Biography

Associate Professor of Linguistics at the University School for Advanced Studies (IUSS Pavia), Director of NETS Lab, the IUSS Laboratory for Neurolinguistics, Computational Linguistics, and Theoretical Syntax, since 2021. Affiliated to CISCL (Interuniversitary Center for Cognitive Studies of Language, University of Milano Bicocca, University of Siena) since 2020.

Ph.D. in Cognitive Sciences from the University of Siena (2005), Second Level Master's in Mathematical Logics, Bioinformatics, Computer Science, and Computability Theory (2007), and post-doc at the same university until 2011. Erasmus+ visiting professor at the Institute Jean Nicod (Paris, 2019) and the Max Planck Institute (Leipzig, 2017). Project Manager at the Microsoft Language Development Center (MLDC) in Lisbon (2008-2014); Erasmus professor at the University of Geneva (2006); Marie Curie Fellowship at City, University of London (2004-05); and Visiting Scholar at the Department of Linguistics and Philosophy at MIT (Cambridge, MA, 2001-2004).

His main research areas include Computational Linguistics (grammatical formalisms, complexity theory and parsing, including very large language modeling assessment), Language Acquisition, and Linguistic Disabilities (deafness, primary progressive aphasia).

Among the projects to which he has contributed, the following are particularly noteworthy:
-"T-GRA2L - Testing GRAdeness and GRAmmaticality in Linguistics" (2022-2025, national coordinator of the PRIN 2022 project: https://www.nets.iusspavia.it/research/GRA2L/);
- European project "Fala Global 2008" for Worldwide Development of Speech Technology (2011-2014, project manager at MLDC, Lisbon);
- national research project "FIRB 2009": Fundamental research on language in the service of the Italian language (post-doc at the University of Siena).

He participated in the development of the OS Microsoft Windows Mobile 7 and 8 and he created Machine Learning classifiers for Primary Progressive Aphasia variants (Wellcome Trust, UK). He developed an on-line "Italian" > "Italian Sign Language" Machine Translation demo tool and an aligned, fully annotated, corpus plus a visual editing tool for semi-automatic tagging of new linguistic data (Centro Ricerche RAI, public broadcast television, Siena University Treebank) and a demo parser for Italian (Phase-based Minimalist Parser) based on a (minimalist, in the sense of Chomsky 1995) grammatical framework dubbed "Phase-based Minimalist Grammar" (PMG, Chesi 2007). A related project is Top-Down Left-Right Grammars, now evolved in a formalization framework called "expectation-based Minimalist Grammar" (e-MGs: https://github.com/cristianochesi/e-MGs).

He edited 3 books, 1 linguistic test for grammatical competence assessment in deaf children (COnVERSA) and authored 4 monographs. He published more than 100 articles including journal papers (Linguistic Inquiry and Journal of Psycholinguistic Research a.o.), proceedings (GLOW and LREC, a.o.) and book chapters (McGraw-Hill, Cambridge and Oxford University Press a.o.).
