## Biography

Andrea Moro (Pavia, 1962) graduated in Classical Literature at the Università di Pavia, obtained a Ph.D. in Linguistics at the Università di Padova and a Diplôme d'études supérieures (DES) in "Théorie de la syntaxe et syntaxe comparative" at the Université de Genève in 1993. He has been visiting scientist at the "Department of Linguistics and Philosophy" at MIT in 88/89 - as a Fulbright Student - in 91/92, in 07/08 and in 08/09; and at the "Department of Linguistics" at Harvard University in 05/06 and 06/07. He has been Associate Professor of History of Linguistics at the University of Bologna, Full Professor of General Linguistics at University San Raffaele in Milan and he is presently professor, former director of the Department of Cognitive, Social and Behavioural Sciences and deputy Rector at the School of Advanced Studies where he funded and directed the Neurocognition, Epistemology and Theoretical (NEtS) Syntax Research Center for six years. As the scientific coordinator of the Linguistic Unit, he contributed to the foundation of the Department of Cognitive Sciences at the Istituto Scientifico H "San Raffaele" in 1993 in Milan.

His main fields of research are theoretical syntax and neurolinguistics. In the former field, he explored clause structure, by focusing on expletives, unaccusativity, locality and syntactic movement, and the relation between syntax and semantics, by focusing on predication, existential sentences, definiteness effect, quasi-copular sentences. In the latter, he studied the relation between syntax and the brain as it emerges from neuroimaging and electrophysiological techniques. Among his major contributions are the discovery of inverse copular sentences, the principle of Dynamic Antisymmetry, i.e. of symmetry-breaking phenomena in human syntax, the neurobiological correlated of "possible" vs. "impossible languages", the effect of negation on premotor cortex activity, the electrophysiological representation of inner speech and the electrophysiological isolation of basic syntactic structures from sound information.

Among his publications, some scientific books: *The raising of predicates* (Cambridge University Press, 1997); *Dynamic Antisymmetry* (The MIT press, 2000); he also wrote popular essays such as: *I confini di Babele*, II edizione (Il Mulino, 2015; trad. ingl. *The boundaries of Babel*, MIT Press 2015), *Breve storia del verbo essere* (Adelphi, 2010; Engli. transl. *A short history of "be"*, MIT Press, 2018), *Parlo dunque sono*

(Adelphi 2012; trad. ing. *I speak therefore I am*, Columbia University Press 2016), *The Equilibrium of Human Syntax* (Routledge, 2013), *Impossible Languages* (The MIT Press, 2016), *La razza e la lingua: sei lezioni sul razzismo* (La nave di Teseo 2019), "The secrets of words" with Noam Chomsky (MIT Press; it. transl. "I segreti delle parole", La nave di Teseo).

He also published several papers as a single author and in collaboration, including: "Syntax and the Brain. Disentangling Grammar by Selective Anomalies", *NeuroImage* 13, pagg. 110–118, 2001; "Neural correlates for the acquisition of natural language syntax", *NeuroImage*, 17, pp. 700-709, 2002; "Broca's area and the language instinct," *Nature neuroscience*, vol.6, pp. 774-781 e "Negation in the brain: modulating action representations", *NeuroImage*, "Sound representation in higher language areas during language generation", *Proceedings of the National Academy of Science (PNAS)*, 112 (6), pp. 1868-1873 2015; "On the similarity between syntax and actions", *Trends in cognitive science*, 2014 Mar;18(3):109-10, 2014; "Clause structure folding and the wh-in situ effect", *Linguistic Inquiry*, Volume 42, Number 3, Summer 2011, pp. 389-412, 2011; "Language, mind and Brain", *Nature Human Behaviour*, Vol. 1 DOI: 10.1038/s41562-017-0184-4, "High gamma response tracks different syntactic structures in homophonous phrases". *Nature Sci. Rep.* 10, 7537 <https://doi.org/10.1038/s41598-020-64375-9>. "The duality of syntax" in collaboration with Ian Roberts on NLLT; "Three reasons why AI doesn't model human language" *Nature* 627, 489 (2024) in collaboration. His first novel, "Il segreto di Pietramala" (La Nave di Teseo, 2018), was awarded the international Flaiano prize for literature; the novel has been translated in English by Anne Milano Appel in 2023.

He is a member of the *Academia Europaea* (London) and the *Pontifical Academy of Lettere e Arti* (Vatican City).
